Molecular dissection of the dysferlin protein complex in skeletal muscle

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus Dr. D. D. Breimer,
hoogleraar in de faculteit der Wiskunde en
Natuurwetenschappen en die der Geneeskunde,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 26 september 2006
te klokke 13.45 uur

door

Yanchao Huang

geboren te Liaoyang, China in 1975

Promotiecommissie

Promotores: Prof. Dr. Ir. S. M. van der Maarel
Prof. Dr. R. R. Frants

Co-promotor: Dr. J. T. den Dunnen

Referent: Prof. Dr. H. J. Tanke

Overige leden: Prof. Dr. M. de Visser (AMC, Amsterdam)
Prof. Dr. K. Bushby (Institute of Human Genetics,
Newcastle, UK)

The studies presented in this thesis were performed at the Center for Human and Clinical Genetics, Leiden University Medical Center, Leiden, the Netherlands. The studies were supported by Senter Novem (IGE01019A), an agency of the Dutch Ministry of Economic Affairs.

The printing of this thesis was financially supported by:

- J. E. Jurriaanse Stichting
- Dr. Ir. Van de Laar Stichting

Dedicated to my parents and my husband

Contents

Chapter 1	General introduction	9
Chapter 2	Protein studies in dysferlinopathy patients using llama-derived antibody fragments selected by phage display	29
Chapter 3	AHNAK, a novel component of the dysferlin protein complex, redistributes to the cytoplasm with dysferlin during skeletal muscle regeneration	39
Chapter 4	Calpain 3 proteolysis regulates AHNAK turnover and prevents its interaction with dysferlin and myoferlin	63
Chapter 5	General discussion and future perspectives	85
Summary		95
Samenvatting		97
Acknowledgements		99
Curriculum vitae		101
Appendix	Colour figures	103
